

DS-2 DYNAMIC RACING CONCEPT

NOVITÀ! PASTIGLIE FRENO SBS DS-2

// Presa iniziale morbida

// Sensazione di frenata e prestazioni di arresto progressive

Le opinioni dei piloti:

« Ottimo feeling all'avantreno della moto durante le forti frenate in curva »

« Si ha la sensazione che sia più facile fermare la moto »

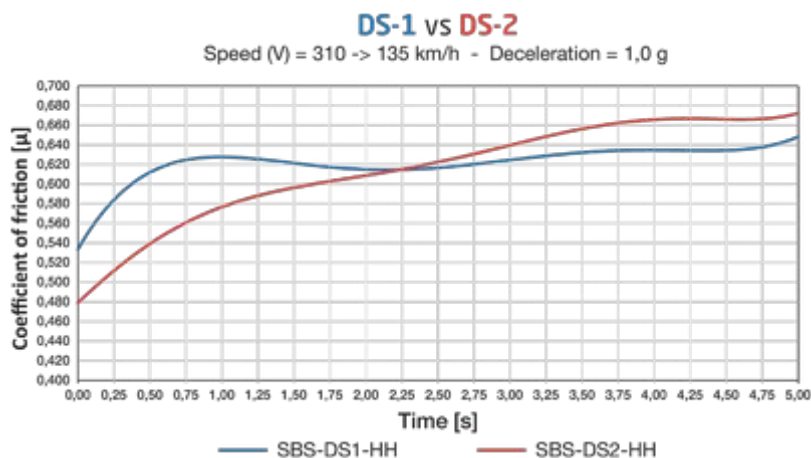

NOVITÀ! PASTIGLIE FRENO SBS DS-2

Numerosi piloti preferiscono le famose DS-1 per le aggressive caratteristiche di presa iniziale e le prestazioni di arresto lineari e prevedibili, senza variazioni nelle performance.

Altri piloti hanno chiesto invece una mescola con presa iniziale leggermente più morbida e una maggiore potenza alla fine di lunghe frenate. Sulla base di queste richieste, abbiamo sviluppato il DS-2.

Nelle stagioni 2017 e 2018, squadre selezionate dei campionati mondiali Superbike, Moto2 e Moto3 GP, British Superbike e World Endurance hanno partecipato attivamente alla messa a punto del DS-2.

ANALISI COMPARATA DS-1 e DS-2

* Dinamometrico: Simulazione mondiale SBK, distanza in gara 18 giri

Arresto: Variante Ascari al giro 11

Frenata: 310 km/h > 135 km/h

NOVITÀ! COMBINAZIONE UNICA IN BASE AL VOSTRO STILE DI FRENATA

Durante lo sviluppo del DS-2 abbiamo ricevuto diversi feedback, a conferma che ogni pilota frena o percepisce le prestazioni di frenata in modo diverso. Per questo motivo è stato elaborato un concetto di freno completamente nuovo: il Dynamic Racing Concept. Esso combina il meglio di due mondi: la forte presa iniziale e le prestazioni lineari di arresto del DS-1 e la morbida presa iniziale e le prestazioni progressive di arresto del DS-2.

Ovvero, una precisa messa a punto delle prestazioni di frenata in base alle preferenze di ogni singolo pilota.

DS-1/DISCO SINISTRO DS-2/DISCO DESTRO

Le opinioni dei piloti che testano la combinazione DS-1/DS-2:

« Il DS-1 rende la presa iniziale più aggressiva rispetto al DS-2, per conferire maggiore stabilità all'avantreno e garantire entrate in curva più facili »

« Il DS-1 ha ridotto il forte effetto servo del DS-2 »

« Il DS-2 ha ridotto leggermente la presa iniziale aggressiva del DS-1 e la moto risulta più facile da gestire in caso di forti frenate »

« Il DS-2 offre una potenza alla fine della frenata leggermente maggiore rispetto al DS-1 e permette quindi di ridurre la velocità più facilmente prima di entrare in curva »
