

## IMPORTANT – PLEASE READ BEFORE INSTALLING YOUR WINDSCREEN

Please note that certain windscreen shapes, including those from a wide range of makes and brands, can under specific conditions reflect sunlight onto your motorcycle's dashboard. This may result in concentrated heat that could damage sensitive components such as the instrument panel, gauges, or dash plastics, potentially causing warping or melting. To help prevent this, we recommend covering the dashboard area if your motorcycle will be parked in direct sunlight for any length of time and place your motorcycle facing the sun.

We cannot accept liability for any damage caused by sun exposure or related heat issues.

Example of how sunlight reflecting inside a windscreen can create a concentrated heat spot:
