**We recommend using a medium-strength threadlocker.**

**Instructions (same for both right and left sides):**

**Install the pannier racks according to the attached photos.**

Once the pannier racks are installed, take the SHAD mounting kit. This kit includes a plastic mounting adapter. Slide the adapter onto the tube and attach the case; this will allow you to determine the exact position of the plastic adapter. We recommend securing it with an M5x16mm ID.5 screw. You will need to create an M5 thread in the rack. Mark the hole position through the plastic adapter onto the steel rack, then remove the steel rack and drill a hole using a 4mm drill bit. Use an M5 tap to cut the thread. We recommend this securing method, but unfortunately, we cannot pre-tap the thread before the rack is fitted to the motorcycle.
